

Should You Repair or

# REPLACE YOUR FURNACE?

When you're having problems with your **furnace**, you may be unsure whether you should replace it or repair it. Here are some signs that you should replace your furnace.

## 1 Your Furnace is Over 15 Years Old

An old furnace will gradually start to lose its efficiency. Even if you stay on top of **furnace maintenance** and furnace repair services, an old furnace just won't be able to do a good job of warming your home. Contact a professional HVAC contractor if you have an old furnace and need a new one.

## 2 Your Furnace Repairs Are Frequent

If heating repair costs are becoming too frequent and too expensive, it's probably a better idea to replace your furnace. Multiply the age of your furnace by the cost. That total should equal less than 5,000. If it doesn't, you'll need professional **heating replacement services**.

## 3 You Suddenly Have High Energy Bills

An old and inefficient furnace means your furnace is struggling to evenly heat your home. This will cause a spike in your energy bills. If your **energy bill** has suddenly increased, you may need heating replacement services.
